Weather-resistant

Weather-Proof Light Weight Aluminum

1... Set-Up Legs

2... Slide in Side Panels

3... Put on Platform

Adjustable Legs can be set up to 24", 32", 40" and 48"

4' x 4' Stage Platforms

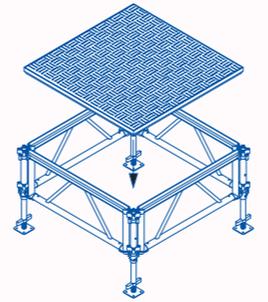

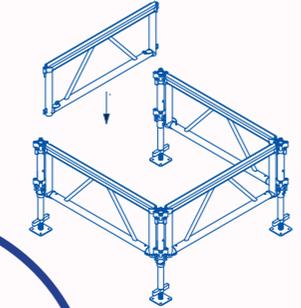

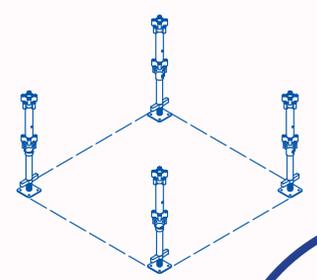

4' x 4' Side Panels

Use our stage builder at allterrain.intellistage.com to design your custom stage online instantly!

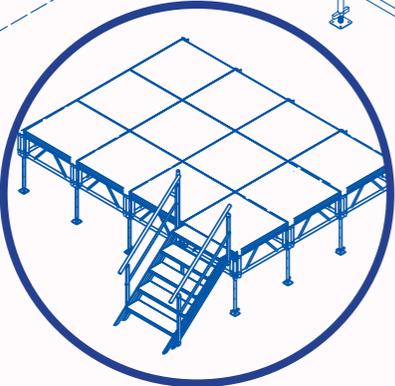

Pre-packaged stage kits are available

Smart Money Saving Design...

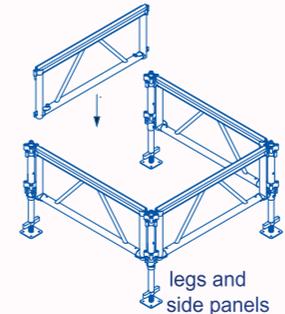

As the stage grows in size so do your savings since multiple stage panels end up sharing the same side panels & legs thus cutting down on the number of legs and panels you need to purchase.

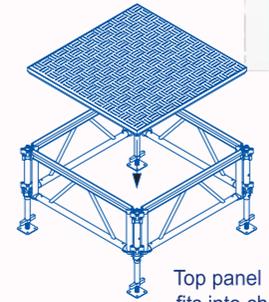

4... Multiple sections fit together to create the size you need

How does All-Terrain Staging work?

One word...Physics. Our brilliant and simple design is held in place by the force of our side panels and legs working together. 4 legs and 4 side panels create a square frame with a channel. The Platform is then placed into this channel and is held together by gravity. Smart and simple. The assembly of a basic stage is fast, easy and nearly tool-less. The same principles work together to link multiple staging sections together as you stage grows in size.

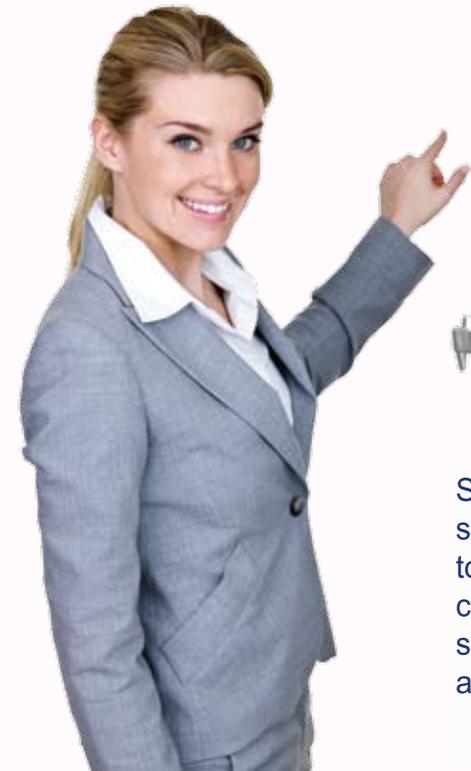

legs and side panels

Top panel fits into channel

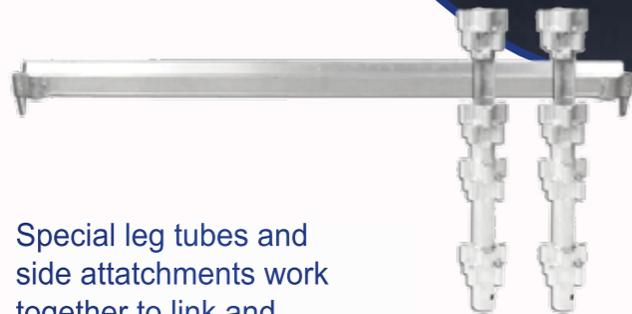

Create seated risers
or link multi-height stages
together using our multi-height stage
connector kit...

Special leg tubes and
side attachments work
together to link and
create multi-leveled
stages or seated risers
at 8" intervals.

stage at different heights

Stage Skirts

are available in 8 foot long
sections 24", 32", 40" and 48"

Ramps

are available in several configurations

ALL-TERRAIN ACCESSORIES

Leveling Tool

The Leveling Tool is a huge time saver! The Leveling Tool is designed to ensure that your stage is properly leveled during set-up. A bubble level is incorporated in the center of the tool and indicates which legs need to be finely adjusted in order to properly level the stage surface.

Non-Slip Mats

are intended to protect wood, gym or carpeted floors. They also add traction and ensure that the stage will not move during use on slick surfaces such as a gymnasium floor.

Spike Legs

attach to stage legs so your stage can be installed on soft or loose gravel, grass or dirt.

Slope Wedges

are required when your stage needs to be set up on a sloped ground surface. The Wedges attach directly to the All Terrain Leg base and are adjustable to almost any degree of slope.

ALL-TERRAIN TRANSPORTATION

Storage Trolleys...

are available in several sizes and configurations depending on your needs.
